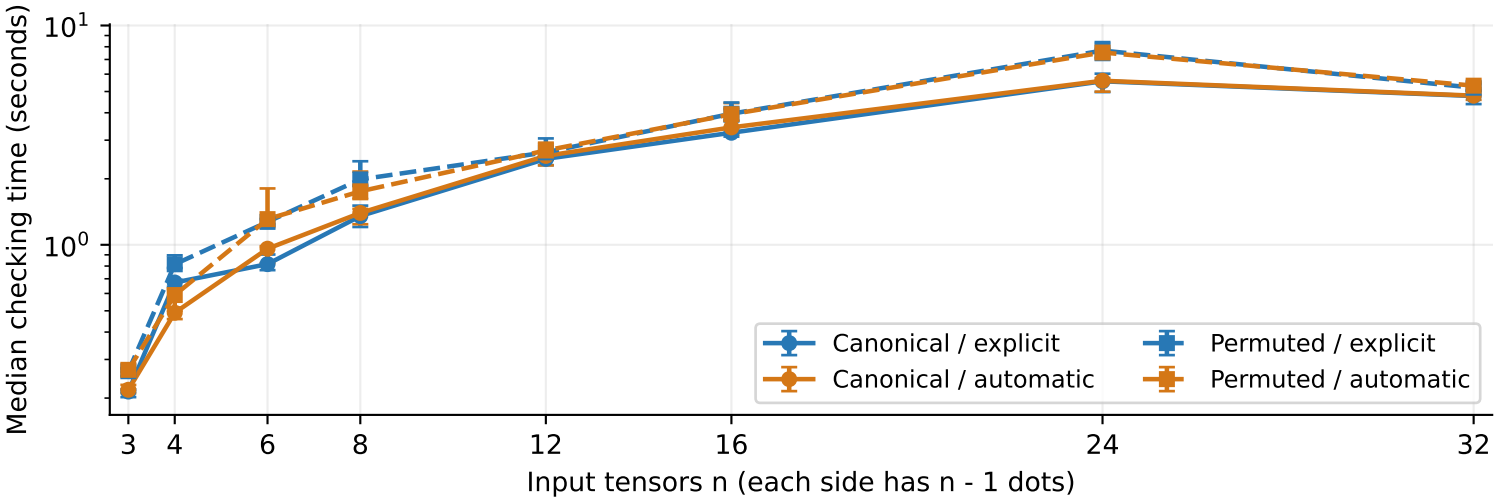
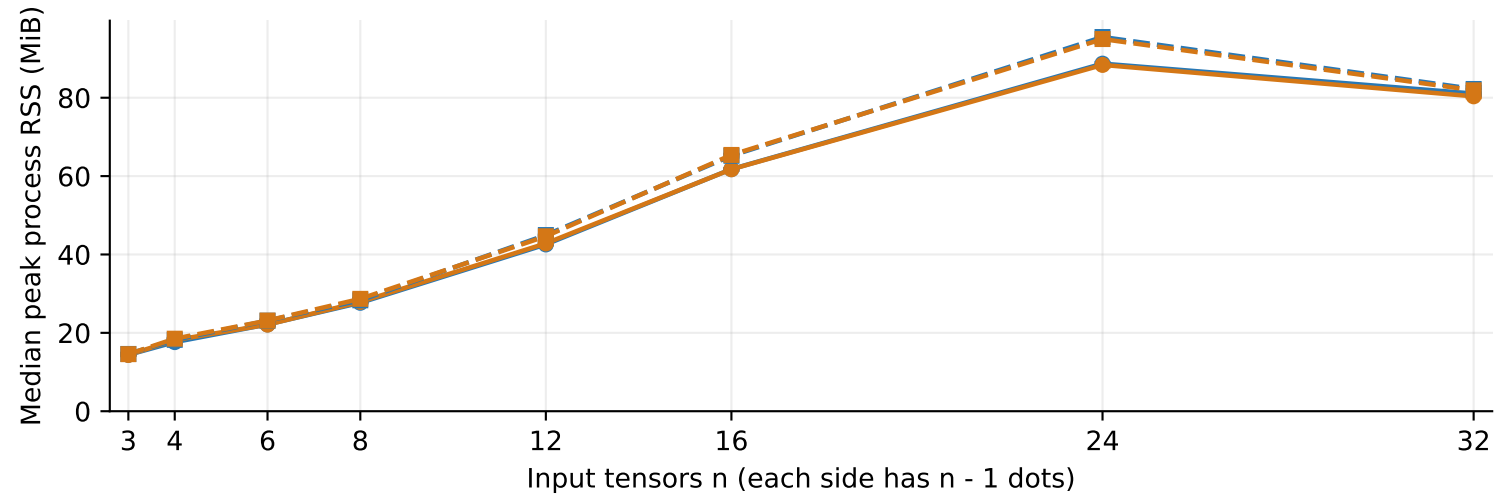
Dot-chain checking attempts: no dot-chain case proved





Outcomes at every tested size

	3	4	6	8	12	16	24	32
Canonical / explicit	U	U	U	U	B	B	B	B
Canonical / automatic	U	U	U	U	B	B	B	B
Permuted / explicit	U	U	U	U	B	B	B	B
Permuted / automatic	U	U	U	U	B	B	B	B

Input tensors n (each side has n - 1 dots)

All attempts shown above; these times do not measure successful proof scalability.
P = proved; B = internal budget; U = unresolved; T = timeout; E = error; M = mixed.
Five runs; min/max whiskers; algebraic policy; fixed budgets; 30 s timeout. CLI report output included.
